Cover image
Yohance Osborne | Mathematics
Finding Beauty in Sequential Forms
The artwork is the result of applying a choice of four different transformations to a modification of a discrete-time dynamical system described by the well-known Ikeda map. Each plot featuring in the collage is the outcome of the execution of 150,000 iterations in Python of these Ikeda-based sequences. From the top row of the collage, we see in each image a highly dense clustering of points in a single area, suggesting the existence of an attractor in the long-time limit for these systems. In each of the remaining images however, we observe a more even distribution of points in the long-time limit across the area spanned by the plot. Besides these basic features, each image possesses a curious three-dimensional impression even though the plots are generated in two-dimensions.

FAQs
Answers to all these queries and more can be found on our Doctoral School FAQ webpage.

• What if I’m not getting on with my supervisor?
• What is a thesis?
• What is a PhD? What are the main milestones? What do I have to do?
• I don’t know what’s expected of me in my programme.
• I don’t have a desk. Where can I work on campus?
• How do I open a bank account if I’m not British?
• How do I get paid my stipend?
• What if I run out of money?
• What if I can’t find housing?
• I’m new to London. How can I meet people?
• How do I find a doctor (GP)?
• Where can I find mental health support?
• What if I get sick?
• What if I get pregnant?
• What if I need to pause my studies?
• Where can I find career support, especially if I don’t want to stay in academia?
WELCOME AND KEY INFORMATION
Welcome to UCL and to the Doctoral School Handbook. The Handbook outlines the support available to you as a research student on one of our PhD, professional doctorate, MD(Res) or MRes programmes at UCL. We at UCL are committed to ensuring that the quality of your research training is of the highest level. We believe that a high quality research environment informs high quality education and we are proud to have been judged to be one of the leading research universities in the world.

There is no doubt the research world has been changed by the Covid-19 pandemic. Our research and research training has continued during the crisis using on-line communications even when buildings, labs and archives were closed albeit with inevitable changes. As we come out of the pandemic the changes we made that our students and supervisors told us provide benefit have been embraced.

Currently UCL has around 8,000 research students and over 6,000 academic and research staff involved in your supervision spread across our 11 faculties.

UCL academic staff have some of the strongest backgrounds in their specialist fields in the world. UCL is a centre of innovative cross-disciplinary research and across the College the research students play a vital part in this stimulating research environment. Welcome to this community.

We want you to become ‘creative, critical, autonomous intellectual risk takers’ through your research degree at UCL. These characteristics are also sought in leadership roles in many areas beyond research and we hope to give you the opportunity to find out more about these too during your time here. Research is an international business so it is important that you gain experience communicating and defending your work nationally and internationally.

As a member of UCL we expect you to strive for the highest standards of integrity in your work and I encourage you to read the information, including UCL’s Statement on Research Integrity, on UCL’s research integrity web pages: www.ucl.ac.uk/research/integrity

The Doctoral School is here to ensure that your time at UCL fulfils your needs and expectations, equips you for leadership roles in the research world and elsewhere, and enables you to make the most of the excitement of research. We look after your interests through a Code of Practice for Research Degrees which sets out clearly the standards you can expect from UCL.

The Doctoral School online Research Student Log provides a means to manage your project and to track your research career at UCL. It gives a focus to help you develop skills which you can apply to both the academic and non-academic worlds to set you up for your future career.

Through courses, inter-disciplinary programmes and scholarships we encourage students to look beyond the boundaries of their chosen discipline, as well as sharing and broadening knowledge across disciplines through societies and competitions.

In this Handbook you will find details of activities and events to support you during your time here, and how you can benefit from them. More information and resources can be found on our regularly updated website at: www.ucl.ac.uk/docschool

The strategy for doctoral education at UCL can also be found on the Doctoral School’s website at: www.ucl.ac.uk/docschool/strategy

We in the Doctoral School are here to give advice particularly on issues you may wish to discuss outside your department that may arise during your time at UCL – to help when things go wrong, as well as to celebrate your successes.

I would like to wish you the best for your research at UCL and encourage you to make the most of the rich and diverse research training environment at UCL.

I look forward to meeting you at some of our forthcoming events.

Professor David Bogle FREng
Pro-Vice-Provost of the
Doctoral School

“We want you to become ‘creative, critical, autonomous intellectual risk takers’ through your research degree at UCL.”
WHAT IS RESEARCH?

You have just embarked on a transformative journey as a research degree student – congratulations! But what do we mean by research in this ‘research-intensive’ environment? Research involves exploring fundamental questions through rigorous investigation and analysis. These questions can be about almost anything: natural phenomena, cultural understanding, the way people organise and operate, the ways we design new processes and procedures, about our understanding of who and what we are and how this defines the human condition, and so on.

Research involves learning the mechanics of doing experimental or theoretical work, but also in questioning the methods and tools used, and in developing new ones.

Researchers work within a discipline and a tradition, but are also engaged in questioning its assumptions, re-conceiving and re-drawing its boundaries with other disciplines. Undertaking research is also then a process of defining what constitutes research itself, questioning and testing orthodox views and approaches as you go.

Your research degree is a unique chance to develop and lead your own project and follow it through to a conclusion which you can defend. You will have either proposed a topic yourself or been given a broad scope to explore but by the end it will definitely be your project albeit with some ideas from others who you discuss it with. There will be successes and false starts along the way: not all your ideas or investigations will lead anywhere, but both the fruitful routes and what turn out to be dead-end paths form a critical part of the learning process of research. Your project will be very much yours to defend and promote, and at the end you will have the skills to propose and plan other research projects.

What is research at UCL?

UCL has a proud tradition of thinking differently. Established in 1826 to open up education in England for the first time to students of any race or religion, UCL’s founding principles of academic excellence and research aimed at addressing real problems confronting the world and they continue to frame our approach today. UCL’s commitment to disruptive thinking remains profound, and we aim to encourage all our researchers to think about cross disciplinary approaches that are increasingly needed to address global challenges.

UCL 2034, UCL’s highest level institutional strategy puts it like this: "London’s Global University: a diverse intellectual community; engaged with the wider world and committed to changing it for the better; recognised for our radical and critical thinking and its widespread influence; with an outstanding ability to integrate our education, research, innovation and enterprise for the long-term benefit of humanity.”

What is research in my field?

Research varies enormously across different fields of enquiry. At its most basic level there are differences in the research methods, methodologies and materials employed, and in the day to day activities. You will notice that even within your department there are researchers using very different approaches and working in quite different ways.

Exploring your field, learning about its territory and methods and how these interconnect with other disciplines is all part of the excitement of research and a formative part of becoming a researcher as you develop your own approach.

Some research by its very nature sits across disciplines and UCL encourages all researchers to think about cross disciplinary approaches that are increasingly needed to address global challenges.

Your supervisory team is key to helping you understand the expectations of research in your field of study, as well as providing you with advice on selecting the practical methods and theoretical frameworks that fit your project best. As you become more experienced they will also assist you in becoming independent as researcher and thinker, one who is able to assess the merits of particular research methods, question them and find new ones with confidence. They will also help you to understand the context in which research takes place, the standards and requirements of professionalism in research, and the wider impact of research in society.

What is the outcome?

The main outcome of a research degree is a trained researcher – the thesis documents the evidence to support this. During your research programme you will produce a thesis which documents your original ideas about your chosen focused topic, the methods you have chosen, the evidence to support your ideas, the discussion and conclusions that arise, and all presented within the context of current and past developments. You will develop the research skills and experience for a range of careers, outside academia as well as inside, where tasks require creativity, rigour, and depth.
You will be given many opportunities to develop these skills through your research work but also through activities within your department or division, through attending and presenting at conferences, and through courses and opportunities available through the Doctoral Skills Development Programme.

You will find that undertaking a research degree is a very different experience to the taught undergraduate or postgraduate courses with which you are familiar, or from your recent professional environment if that is where you have come from. It will be demanding certainly, but also we hope rewarding. There are many people within UCL to help you, within your Department or Division but also within Professional Services as outlined in this handbook.

In particular your supervisory team will assist, question, support and challenge you: they will help you develop as an independent thinker and ultimately someone who takes responsibility for your own personal and professional development.

1 www.ucl.ac.uk/2034

Image (right, top): Daen Palma Huse & Ram Shergill
History of Art

Gino Brignoli | Division of Biosciences

“Exploring your field, learning about its territory and methods and how these interconnect with other disciplines is all part of the excitement of research and a formative part of becoming a researcher as you develop your own approach.”
As a researcher it is important to ensure your research is conducted, and the results of your research disseminated, honestly, accurately and in accordance with professional standards. Acting professionally in your research covers a range of professional knowledge and behaviours including awareness of:

- Methodology, analysis and data management, including data protection and confidentiality;
- principles of professional conduct and appropriate practice in your discipline;
- legal requirements and local approvals, including funder conditions;
- research ethics and approval processes;
- health and safety;
- conflicts of interest;
- responsible research innovation;
- public engagement and global citizenship;
- IPR and copyright;
- respect for equality and diversity;
- appropriate authorship, citation, referencing and the avoidance of plagiarism.

Research integrity also extends to your personal behaviour, and how you conduct yourself in working collaboratively with others, during peer review, in declaring potential conflicts of interest, and in showing care and respect for other researchers and disciplines, research participants and their data, and the research record. It is your responsibility to be proactive in seeking advice and support as well as keeping up to date with the latest standards and changes in guidance and legislation relating to your discipline area/s throughout your research career. These are not simple issues, but such concerns are an essential part of the rigours of academic research.

**Research Integrity at UCL**

The Research Integrity website ([www.ucl.ac.uk/research/integrity](http://www.ucl.ac.uk/research/integrity)) acts as UCL’s living Framework for Research Integrity, and draws together information on all elements of research integrity, including ethical funding, research ethics and the relevant policies and guidelines, such as research data management, open access and conflicts of interest. It also provides guidance on areas such as research collaboration, overseas research, peer review, publication and authorship, and mentoring.

In addition, the Research Integrity Training Framework is there to assist you in identifying and fulfilling your knowledge and training needs in these areas: [www.ucl.ac.uk/research/integrity/research-integrity-training-framework](http://www.ucl.ac.uk/research/integrity/research-integrity-training-framework)

There are also relevant training opportunities such the Introduction to Research Support and Integrity module; an introductory session relevant for all those intending to undertake research at UCL and applicable to all disciplines. Your supervisory team and other specialists at UCL will also help you to gain the knowledge and confidence you need for your particular project and staff across UCL are available to advise and support you.

**UCL Code of Conduct**

You are expected to read and adhere to the UCL Code of Conduct for Research, which sets out the general principles of conduct expected of UCL researchers, as well as signposting relevant associated UCL policies, for example the student IPR Policy, and Guidance for the Storage and Disposal of Data and Samples. It is designed to be read in conjunction with the UKRI Policy and Guidelines on Governance of Good Research Conduct that sets out the expectations of our key funders and partners on research integrity: [www.ukri.org/about-us/policies-standards-and-data/good-research-resource-hub/research-integrity/](http://www.ukri.org/about-us/policies-standards-and-data/good-research-resource-hub/research-integrity/).

Further information on UCL’s Research Governance Framework and the Code of Conduct can be found at: [www.ucl.ac.uk/governance-compliance/research-governance](http://www.ucl.ac.uk/governance-compliance/research-governance).

**UK Concordat to support research integrity**

The Concordat to support research integrity if the UK’s national framework for research integrity. The Concordat sets out 5 commitments for researchers, employers of researchers and funders to support and environment and culture of integrity within research.

UCL’s Principles of Integrity were taken from the Concordat’s five core elements of integrity under commitment one: Maintaining the highest standards of research integrity. It is expected, therefore, that researchers at UCL adhere to the responsibilities for researchers set out under the Concordat. You may also find this paper prepared by the American National Academies useful. Most of the discussion is relevant to researchers in all disciplines even though the title is “On Being a Scientist”: [www.nap.edu/read/12192/chapter/1](http://www.nap.edu/read/12192/chapter/1)
Research ethics forms an integral part of proper scientific conduct. UCL is therefore committed to:

- the promotion of excellent research practice and to maintaining the highest standards of rigour and integrity in all aspects of our research;
- developing our research staff and students to be ethical researchers;
- establishing a culture where integrity underpins all our research activities.

**Why is ethics review important?**

Ethical review ensures that a research project adheres to accepted ethical principles and standards (ethics.grad.ucl.ac.uk/accepted-ethical-standards.php) and is conducted in such a way that any potential adverse impact is in proportion to its expected benefit. It also ensures that researchers are accountable for their work (having thought about the ethical implications of their research and pledging to conduct their research in an ethical way). This allows UCL to preserve the rights, health and safety, and privacy of all involved.

One aim of ethical review is to protect participants and/or their data. They are a valuable part of the research process and not merely a means of accessing data, and we need to treat them and all their data with due care and respect. Another aim of ethical review is to protect you as the researcher. Careful consideration of research ethics principles and potential risks may help inform your research methods or increase participant recruitment, and as a result, enhance the quality of your research. In addition, most funding and publishing bodies request that projects have ethical approval (where required). Obtaining ethical approval can also help to demonstrate that you are undertaking a legitimate research study.

**How do I know if I need to apply for ethical approval?**

All research proposals involving living human participants and the collection and/or study of data (to include tissue) derived from living human participants undertaken by UCL students or staff (to include honorary staff, affiliate academics and visiting researchers) on UCL premises and/or by UCL staff or students elsewhere requires ethical approval. Approval may be needed from the UCL Research Ethics Committee (REC), a REC operating under the Health Research Authority (HRA), an overseas REC or a combination of the above.

It is the responsibility of the Head of Department as outlined in the Academic Manual: Duties and Responsibilities of Heads Of Department to ensure that staff and students of the Department are apprised of UCL’s arrangements for research governance and the associated procedures, the main components of which include UCL’s Statement for Research Integrity and associated research integrity website as well as the UCL REC: constitution, terms of reference and guidelines.

Ethical approval must be obtained prior to commencement of a study; retrospective approval will not be granted. You need to be certain if your research requires ethical approvals prior to commencement as:

- Funders often require this as part of their conditions of award;
- Publishers may require proof of approval for publication;
- Not obtaining the appropriate permissions could be classed as potential research misconduct under UCL’s Procedure for investigating and resolving allegations of misconduct in academic research (2017) and may lead to disciplinary action;
- Not receiving approval could impact on a research participant’s settlement in the event of a claim and could damage UCL’s insurance profile. The individual researcher bears personal responsibility for any claim.

For further advice and guidance please visit the UCL REC website: ethics.grad.ucl.ac.uk or email: ethics@ucl.ac.uk

**Remember – It is expected that all studies that require ethical approval have that approval in place prior to the start of the research. Ethical approval will not be granted retrospectively.**
COMMUNICATING YOUR RESEARCH TO THE OUTSIDE WORLD

Contributing to the advancement of your discipline and developing novel lines of enquiry are fundamental to doctoral research, but all researchers at UCL are also expected to disseminate the results of their research through appropriate channels, including publication, teaching, commercialisation and engagement with policymaking and the public.

Public Engagement: UCL has one of the most established and largest Public Engagement teams in the country. The UCL Public Engagement Unit is situated within UCL Culture and provides advice, training, funding, resources and activities to help UCL researchers listen to and engage with communities and to embed public engagement within all stages of the research cycle: www.ucl.ac.uk/culture/public-engagement

Innovation: UCL Innovation and Enterprise is a team based at BaseKX in King’s Cross who offer students training and support to encourage creative and entrepreneurial ideas and mindsets. www.ucl.ac.uk/enterprise/

Public Policy: UCL Public Policy connects UCL researchers, staff and students with policy professionals to inform policy with evidence. www.ucl.ac.uk/public-policy

Volunteering: The Volunteering Services Unit is based in the Students’ Union UCL and funded directly by UCL. It is one of the biggest volunteering departments in the UK and aims to help you get involved in exciting community volunteering opportunities across London: studentsunionucl.org/content/volunteering

Impact: All doctoral theses at UCL now include a requirement to write an impact statement. This will allow you to gain some experience in writing about the potential impact of your work and convincing others of its importance – a vital skill in many areas of future work, not just academic careers. There is a course on how to write impact statements available via the Doctoral Skills programme.

Youngjun Cho | Computer Science

Gillies Adamson Semple | Slade School of Fine Art
Open Science, Open Scholarship or Open Research – what name is used is less relevant than the grouping of principles and practices which this term encompasses.

Open Science is about increased transparency, re-use, participation, co-operation, accountability and reproducibility for research. It aims to improve the quality and reliability of research through principles like inclusion, fairness, equity, and sharing, which extend across all disciplines.

Open Science introduces different approaches to the way research is done – including opening access to research publications, data-sharing, open notebooks, transparency in research evaluation, ensuring the reproducibility of research (where possible), transparency in research methods, open source code, software and infrastructure, citizen science and open educational resources.

A commitment to openness is a fundamental attribute of UCL’s culture and much is done within the institution to support open approaches to all academic endeavours. The global pandemic we have all lived through has highlighted the importance of openness and sharing in research leading to UCL’s statement on the importance of Open Science. UCL’s involvement in Open Science predates 2020 though, and we have long taken a lead, nationally and internationally, in adopting and supporting open approaches to research. As a result, UCL established the Office for Open Science and Scholarship; Launched in October 2020, the Office is a focal point for open research and education activities and a gateway to the support provided within the institution. The launch event includes Dr Paul Ayris, Head of the Office for Open Science and Scholarship, talking about UCL’s aspirations in relation to Open Science.

The Office for Open Science provides an active programme of events, such as the annual Open Science Day, and regular communications on relevant activities within UCL and beyond. It also brings together services supporting Open Science and Scholarship at UCL, such as Open Access Services, Research Data Management Support, Metrics and Bibliometrics, UCL Press, Research Transparency & Reproducibility and Citizen Science.

Regardless of whether open principles and practices are already well-embedded in your research discipline, UCL believes that key to making open science the norm within the research environment is engagement with early career research, as a result an active (and growing) programme of training and development opportunities is available. All relevant training opportunities are listed on the Office for Open Science and Scholarship pages: www.ucl.ac.uk/library/research-support/open-science/training-and-skills

Jack Barnett | Bartlett School of Architecture
KEY DOCUMENTS AND TOOLS FOR ALL RESEARCH STUDENTS

Having a clear picture in your mind of the regulations and requirements of your research programme from the outset, and of where to start in making the most of the huge range of opportunities open to you at UCL, is vital. Your plans and goals will change as you grow and develop as a researcher, but clear short and long term aims and regular review of progress is key to actively managing your research project and your time at UCL.

The wealth of information and opportunities can be somewhat overwhelming however, particularly when you are just starting out. This page lists the four key documents and tools for all UCL research students to assist you in the successful management and completion of your programme.

Code of Practice for Graduate Research Degrees
The Code of Practice sets out what you as a research student can expect from your supervisory team and from UCL, and what your supervisors and others in UCL can expect from you. The Code provides an invaluable and user-friendly map of the landscape of your research degree, together with signposts to key policies, procedures and the roles of key personnel such as Supervisors, Departmental Graduate Tutors and Faculty Graduate Tutors.

It is important that you read this document carefully at the outset of your time at UCL and keep it for reference. You will receive a hard copy of the Code from your department, and it is also available online on the Doctoral School's Essential Information webpage: www.ucl.ac.uk/docschool/essinfo

UCL Academic Manual
The UCL Academic Manual brings together in one location the academic regulations, policies and procedures for UCL research students. It details the regulations for our research degrees from admission to the final completion of the degree together with the formal processes and requirements at each stage. Here you will also find full details of the requirements of your final thesis – its length, writing and presentational conventions, but also the criteria by which it will be judged.

The Academic Manual is available online via the Doctoral School’s Essential Information webpage: www.ucl.ac.uk/docschool/essinfo

Research Student Log
The Research Student Log is an online project management tool designed to assist you throughout your degree programme at UCL. Its use is mandatory for all UCL research degree students and it provides a framework for planning and recording your research progress and scheduled supervisory meetings, together with help in analysing, planning and charting evidence of your academic and generic skills development. See page 18 for further details on the Log.

The Doctoral School Website
www.ucl.ac.uk/docschool

The Doctoral School website is the place to find out about all the support provided for you as doctoral students. It is updated regularly.

- Essential Information
- Strategy, Governance and Policy
- Support & Advice
- Funding & Scholarships
- Events & Competitions
- Networks & Societies
- Representation & Surveys
- Postgraduate Teaching Assistants
- International Study

IRIS
The Institutional Research Information System (IRIS) is the research portal for UCL connecting to Research Staff and Postgraduate Research Students. The portal allows you to search for researchers, publications, activities, groups, themes and departments with active research activities and publications at UCL.

Contact Details for the Doctoral School
Tel: +44 (0) 20 7679 1422
Email: docschool@ucl.ac.uk
There is a wealth of advice and support for doctoral students at UCL covering your academic and professional development. There is also support in instances where you might need specialist help with more personal issues that arise.

**Supervisory Team**

Key to your academic and professional development as a researcher, your supervisors should be your first port of call for advice and support on almost any matter; if they can’t help directly, they can help you find out who can.

**Departmental Administrators**

Have a wealth of experience to help you navigate successfully through your time at UCL. Some departments have named PhD Administrators, but all will have administrators with detailed knowledge of your department and the administration of your programme.

**Departmental Graduate Tutors**

Often referred to by the acronym DGT, each department has an experienced member of academic staff from whom you can seek independent advice on both academic and pastoral care matters if you need to talk to someone beyond your immediate supervisory team.

**Faculty Graduate Tutors**

Each department sits within a faculty and each faculty also has an FGT, a senior and experienced academic whom you can contact if you wish to seek advice outside your department.

**Student Enquiries Centre**

A central office for all student enquiries, including: confirmation of registration/award, updating your student details, enrolment, ID cards, Immigration and visas, etc. If the Student Centre can’t assist directly, they will signpost you to the correct person to help you. You can also contact them online via askUCL, our new online student enquiry system.

**Student Support and Wellbeing**

A team of expert wellbeing, disability and mental health advisers provide a safe, confidential and non-judgmental space, in which you can discuss any issues that may be affecting your ability to study. There is a range of services, including:

- **Student Disability Services**
  Providing information and advice for all disabled UCL students. Organising support services such as note-taking, communication support, mentoring and study skills tuition. They can also assist students in applications for Disabled Students Allowance and other funds, and can provide assessments of dyslexia and other learning difficulties.

- **Student Psychological Services**
  They provide an accessible and effective professional resource for students who are facing emotional and psychological problems. You can contact them online or via email or phone. You can request an appointment by video call, phone call or using Microsoft Teams chat functionality. Doctoral students can also access the Employee Assistance Programme (Tel: 0800 197 4510 – this is a free service) and online CBT for issues such as stress and anxiety via Silvercloud.

- **Support for specific student groups**
  Information and advice for a range of communities, including LGBTQ+ students, mature students, student carers, BME students, distance learners, and students of faith.

**UCL Student Mediator**

Is responsible for advising and assisting UCL students with the resolution of complaints, involving staff or other students or services of UCL which the student has been unable to resolve through informal means.

**UCL Doctoral School**

Provides advice to students and supervisors on informal matters concerning the supervisory relationship. Students’ Union UCL Advice Service Based in the UCL Students’ Union building on central campus, the Students’ Union Advice Service provides information and advice on a wide range of issues including: immigration, housing and finance. You can also talk to them about any academic issues you are facing: as part of the Students’ Union they are independent of UCL’s formal structures.

**UCL Cultural Consultation Service**

The UCL Cultural Consultation Service (CCS) aims to enhance learning and teaching outcomes for students and staff facing cross-cultural and social conflicts. At present, the service is run by two members of academic staff who both have experience and expertise in this area. A team of consultants from across UCL teaching and student community is also available for advice.

The CCS can help people in a number of ways, usually offering a one-hour initial meeting during which the person seeking advice will have the opportunity to discuss their situation in detail, in an informal and friendly atmosphere. You may be given a follow-up appointment and asked to complete a small exercise for ‘homework’ before coming to the next meeting. All meetings are confidential.
The UCL Graduate Scholarships Programme has been developed to support graduate students who can demonstrate the potential of their research.

**Graduate Research Scholarships (GRS)**

**How many awards are available?** There will be up to 25 awards available for selection in 2021/22.

**Who is eligible to apply?** The Graduate Research Scholarships are open to incoming and current research students from any country. The scholarships are offered across all UCL departments for students pursuing studies on either a full-time or part-time basis. Online, Non-resident PhDs and Professional Doctorate students are not currently eligible for this scholarship programme. Successful candidates will normally hold, or be expecting to achieve, at least an upper second-class Honours UK undergraduate degree or equivalent qualification.

**What does it cover?** The scholarships consist of tuition fees equivalent to the standard postgraduate UK (Home) rate plus a maintenance stipend of £17,609 per annum (2021/22 rate) for full-time study (benefits are calculated ‘pro rata’ for part-time students). The scholarship also includes additional research costs of up to £1,200 per year for the stated duration of the programme. Awards are normally tenable for all years of a full time research degree programme (or years 1-5 of a part-time programme), subject to annual review and renewal. The maintenance stipend will normally be subject to an annual inflationary increase. Funding will be extended to a 4th year if students are on a 1+3 programme or if their programme is of 4 years duration (excluding the writing-up year). Where awards are made to continuing students, they will apply to the remainder of the programme only. Any extension to the period of study beyond the standard programme dates is not included in the duration of the award.

**Other details/criteria:** Scholarships are awarded on the basis of academic excellence and research potential. If granted, funding begins at the start of the next academic session.

**Graduate Research Scholarships for Cross-Disciplinary Training (One-Year)**

**How many awards are available?** There will be up to 4 one-year scholarships available for selection in 2021/22.

**Who is eligible to apply?** These scholarships are open to current UCL MPhil/PhD and EngD students.

They are awarded to students who want to spend an extra year of their research degree in a department other than the one in which they are registered. The duration of the scholarship is one year which can be taken at any point during the research degree programme, although preference will be given to students in their second or third year of study. The purpose of this scholarship is to encourage cross-disciplinary training, which provides the student with relevant research skills and knowledge to enhance their research. Applicants should already be in receipt of at least three-years’ funding to complete their programme. Self-funding students will need to provide evidence that they have full funding for the remaining years of their PhD.

**What does it cover?** The scholarships consist of tuition fees equivalent to the standard postgraduate overseas rate. Awards are also considered where a student has already secured partial funding from a sponsor. Awards are normally tenable for all years of a full time research degree programme (or years 1-5 of a part-time programme), subject to annual review and renewal. Funding will be extended to a 4th year if students are on a 1+3 programme or if their programme is of 4 years duration (excluding the writing-up year). Where awards are made to continuing students, they will apply to the remainder of the programme only. Any extension to the period of study beyond the standard programme dates is not included in the duration of the award.

**Other details/criteria:** Scholarships are awarded on the basis of academic excellence and research potential. If granted, funding begins at the start of the next academic session.

Further information: [www.ucl.ac.uk/scholarships](http://www.ucl.ac.uk/scholarships)
FINANCIAL SUPPORT AND THE DOCTORAL SCHOOL FELLOWSHIP

The Financial Assistance Funds provide maintenance support to students who are in unexpected financial need. There is also a Doctoral School Fellowship fund to support research students who, due to unforeseen circumstances, have their funding interrupted or completely withdrawn.

Financial Assistance Fund (FAF)

Who is eligible to apply?
Current UCL research students only (excluding students on CRS), from any country/UCL department. Applicants must be able to demonstrate having made realistic and adequate financial plans for the academic year, which have unexpectedly changed.

What does it cover?
Awards are for maintenance/living costs only and will vary depending on individual circumstances and availability of funds. The maximum award is £3,000.

How many awards are available?
Award numbers are not fixed, although funding is limited.

Other details/criteria:
Candidates can apply directly via: www.ucl.ac.uk/students/funding/financial-support/financial-assistance-fund

Doctoral School Fellowship (DSF)

Who is eligible to apply?
Current UCL research students only (excluding students on CRS), from any country/UCL department. Must demonstrate circumstances have changed since registration such that, due to unforeseen difficulties, sponsorship originally secured to fund their research programme has been suspended or withdrawn. Students must be progressing well academically and demonstrate that without financial assistance they would not be able to complete their studies/research.

What does it cover?
Up to a full year’s maintenance stipend (at UCL standard stipend rate), depending on need. Any outstanding tuition fees need to be covered by departments.

How many awards are available?
Award numbers are not fixed, although funding is limited.

Other details/criteria:
Candidates cannot apply directly for a fellowship. They must be nominated for support by their Head of Department. Full details are available via: www.ucl.ac.uk/students/funding/financial-support/doctoral-school-fellowship

Other sources of support:
Funded students may also be entitled to parental or sick leave. See further information on the Research Services webpage: www.ucl.ac.uk/research-innovation-services/research-services/research-studentships/studentship-interruptions

Student funding advice and guidance is also available via: www.ucl.ac.uk/students/funding/financial-support/welfare-adviser

Further funding opportunities for research students, including information on UK Government ‘doctoral loans’, can be found here: www.ucl.ac.uk/scholarships/
The Research Student Log is UCL’s online project management and development tool specifically designed for our research students.

The Log provides a framework for students to reflect on and record their progress and development, both personal and professional, throughout their research project. The Research Log includes more review points at the beginning of your journey to ensure you are on track, and then has 6-monthly check-ins thereafter. It also helps you time and plan your two research milestones: the upgrade and the thesis submission. You can also capture your supervision meetings and other important dates and documents here if you choose – this can be useful to ensure that the requirement of at least one formal supervision meeting per month is being met (by both the student and the supervisory team).

At each of these points, you will use the Log to record:

1. **Progress since your last review**
   You and your supervisory team will review the progress against the objectives you set at your last review point. Have these been achieved? Was it necessary to change any and if so how? Do any of your objectives have to be continued into the next period?

2. **Objectives for the next period**
   You and your supervisors will agree and record objectives for the coming period. Research is uncertain so it may be necessary to modify objectives as you proceed, but it is important nonetheless to have a plan that everyone is clear about.

3. **Skills required to complete objectives**
   The skills you need will change over time. This section allows you to actively consider the skills you do not currently possess and those you need to further develop as you move through your programme.

4. **Personal training and development planning**
   This section helps in identifying areas in which you need to develop. The Log provides a facility for students, together with their supervisors, to devise a training and development plan against the Researcher Development Framework (RDF). The RDF helps researchers identify the knowledge, behaviours and attributes of successful researchers, allowing them to plan their development activities in order to suit their individual needs. You will be asked to reflect upon and assess your skill levels across a range of areas throughout your research.

   This self-assessment will help you to identify courses and development opportunities which will assist with your current project and future plans and careers, both within and outside academia.

The Log also provides a record of the skills courses and development opportunities that you have undertaken either via the Doctoral Skills programme (which are recorded automatically) or other training which can be recorded manually.

Increasingly, employers both within and outside the academic sector are expecting and asking for evidence of development at sophisticated levels from their recruits. The Log will provide this evidence and forms an important part of your portfolio as a professional researcher, in addition to the significant contribution to knowledge in the shape of your thesis and the evidence that it provides of your skills.

**Research Integrity training is mandatory for all research students.** This training can be achieved through either a local course offered by your department or the ethics/integrity courses run centrally via the Doctoral Skills programme.

**How to use the Research Log**

Use of the Log is mandatory for all MPhil/PhD, Professional Doctorates, EngD and MRes programmes. It is intended to be used in a flexible manner to allow for different research processes between different disciplines. It is the responsibility of the students to maintain their Logs for their own long-term benefit. The Departmental Graduate Tutor will confirm that the UCL Log has been satisfactorily completed at the upgrade and thesis submission milestones. Further training is offered at 3 times during the year on how to use and get the most of your Research Log. There is an online quick guide to help you get started.
DOCTORAL SKILLS DEVELOPMENT PROGRAMME (UCL DOC SKILLS)

At UCL, training and development opportunities are freely available to all postgraduate research students via the Doctoral Skills Development Programme (UCL DocSkills). The programme covers bespoke sessions for research students and courses attended by both research students and staff, with the aim to expand skills, experience and knowledge sharing among the UCL research community.

Adapting to change
In the past year, the UCL DocSkills programme quickly adapted to COVID challenge by moving all course online, delivered in a combination of synchronous (live training) or asynchronous (self-paced sessions) formats. These courses have also been re-designed to offer bite-size modular learning based on online teaching pedagogy. Training sessions are mainly delivered by subject experts within the UCL community, complemented by input from industry employers and external consultants. Based on the positive feedback received from the research community, the UCL DocSkills programme will continue to be delivered online throughout the 2021–22 academic year, with a selection of interactive face-to-face courses available on campus.

Navigating the programme
Course offerings within the UCL DocSkills programme are grouped into seven intuitive streams (Please refer to the infographic for detailed information about the streams). These streams are developed based on the Researcher Development Framework (RDF), a national framework which sets out the expectations of knowledge, behaviour and attributes of successful researchers.

Training requirements
Research students funded by UK Research and Innovation (UKRI) are required to complete skills development training equivalent to two weeks per year during the full course of their studentship.

UCL DocSkills courses are assigned with training points: a half day training is worth one training point, therefore two weeks (ten working days) of skills training roughly translate to twenty training points per year. Research students are expected to document their training points on the Research Student Log, those who fail to fulfill the training points requirement may be denied the upgrade presentations. Research students should discuss their training needs with supervisors and departmental graduate tutors.

Please find a list of available courses on our website, bookable via Inkpath.

* From initial concept and securing a grant, completing a research project, turning research into a new business or providing consulting services.
OPPORTUNITIES FOR INTERNATIONAL RESEARCH

Research is global – international journals and conferences are key for effective knowledge transfer and for career progression. It is important that you gain experience and confidence in communicating and defending your work nationally and internationally. Meeting people and building international networks will help in your future career.

This is, of course, all part of the excitement of research. At UCL there are a number of opportunities for students to develop their research internationally. This includes support for attendance at conferences, as well as opportunities to study/research abroad, allowing you to spend time at a laboratory, archive or site off campus. While funding is always an issue, there are sources available within UCL and outside, which could help you develop an aspect of your research at another location. You could really gain a stimulating new outlook on your research and the world of research in another culture.

You should enquire with your local administrators or supervisors as to what conference funds are available to you. Some examples are:

- Bartlett Student Conference Fund
- SLMS Graduate Conference Fund: for all research students who are in a department within SLMS
- History Research Funds
- IoE – Centre for Doctoral Education Conference Grants

UCL’s Global Engagement Office can offer advice on region/country-specific concerns regarding international study visits.

### Bogue Fellowships

Generous fellowships to support postgraduate research students and post-doctoral researchers working in the Life and Biomedical Sciences to visit North America.

### Yale UCL Collaborative Student Exchange Programme

Yale and UCL have entered into a unique partnership called the Yale UCL Collaborative.

This is an exchange scheme for doctoral students giving you the chance to apply for the opportunity to have a period of research study at Yale under the supervision of an identified Yale Supervisor.

Places are limited and offered on a competitive basis: as ambassadors for UCL, exchange participants will be expected to make the most of their time at Yale by engaging as fully as possible with Yale’s research community. Exchanges will normally be for a period of three months, and it is hoped that the experience will allow UCL’s doctoral students to forge enduring links between the two institutions and within their research areas.

Here is what a couple of our previous exchange participants have said:

“I am extremely grateful for the help of UCL in making the most of an opportunity to study at Yale for a term and I cannot recommend it highly enough to anybody else who might be interested. Everybody at Yale was very friendly and helpful and they provided the perfect environment for me to do some excellent work.”

“My exchange at Yale University was a great experience I would not have wanted to miss. I gained new knowledge, was able to be a part of another academic environment, meet new people and get new ideas for my project and my future career. I am very thankful that I have been given this opportunity.”

Sabina Blasiotti | Bartlett School of Architecture
Some of the most innovative and transformative ideas from UCL come from our community of doctoral students and research postgraduates.

UCL Innovation & Enterprise offers you the opportunity to develop your entrepreneurial skills and mindset to elevate your future career.

We live in a world full of scientific, societal and technological challenges. Solving them requires researchers at all levels to explore the potential of their ideas. That’s why UCL Innovation & Enterprise offers an extensive range of extracurricular programmes to assist you at every stage of your entrepreneurial journey.

We can help you:

- Identify the entrepreneurial skills you already possess and how they can boost the impact of your research.
- Gain a competitive edge for your career, whether you stay in academia, move into industry or establish your own business.
- Start your own business or social enterprise with support from a specialised team of Entrepreneurship Advisors.
- Meet like-minded entrepreneurial doctoral students within the UCL community, London ecosystem and national network.

The SPERO programme is an entrepreneurship training course dedicated to the needs of UCL doctoral students. It has multiple entry levels catering for everyone from complete business beginners to expert entrepreneurs.

Doctoral Entrepreneurs

UCL Innovation & Enterprise has helped many UCL doctoral students with their entrepreneurial journey. From simply igniting a curiosity in entrepreneurship, to supporting a non-profit organisation that promotes social mobility to providing business advice for a now highly successful commercial venture.

Isobel Pagendam (PhD, Department of Geography) was intrigued by an email she received about the SPERO programme designed to develop PhD students entrepreneurial knowledge, skills and mindset. She had never considered herself to be an entrepreneur before, but the thought of developing real-world transferable skills appealed. Isobel discovered a new affinity for entrepreneurship and went on to intern for the London Mayor’s Entrepreneur competition. She is excited to see how she can combine her research and entrepreneurial flair in her future.

While studying for her PhD in Neuroscience, Rebecca McKelvey had an idea to combine her prior experience as a secondary school science teacher, and her role as a research scientist, to give young people from low income backgrounds opportunities in STEM subjects. With guidance from UCL Innovation & Enterprise, Rebecca founded the non-profit organisation in2scienceUK, that has provided work-experience for 1000s of students from under-represented backgrounds.

Leo Wossnig (PhD, Department of Computer Science) cofounded startup Rahko, a quantum machine learning company that speeds up the drug discovery process. Rahko utilises the expertise of researchers in quantum machine learning and computational chemistry. They have successfully raised over £1.3million from leading venture firms.

“From simply igniting a curiosity in entrepreneurship, to supporting a non-profit organisation that promotes social mobility to providing business advice for a now highly successful commercial venture.”
POSTGRADUATE TEACHING ASSISTANT SCHEME AND UCL ARENA CENTRE

You may be asked by your department to contribute to undergraduate or Master’s level teaching and learning support as a Postgraduate Teaching Assistant (PGTA). The tasks you will be asked to undertake vary between department and discipline, but typically can include demonstrating in laboratory classes, leading tutorial groups and marking essays. This can be a very valuable experience: it can contribute to your intellectual and professional development, and it can also provide an additional source of income to help support your studies. The skills you acquire from teaching, demonstrating and facilitating can readily be applied to future careers in many fields, including academia, education, industrial research, or management.

As researchers who support teaching and learning, PGTA’s can make a unique contribution to UCL’s mission to develop excellence in research-based education.

Your department will provide guidance on what is expected from you as a PGTA, with clear workload allocation to ensure you are not overloaded. UCL follows a comprehensive PGTA Code of Practice for the recruitment, employment, management and payment of postgraduates who support teaching and learning as Teaching Assistants. It is important that your PGTA duties (including teaching and learning support, preparation and training) do not compromise the time you can commit to your core research activities.

All PGTA’s at UCL undertake appropriate development activities to support their teaching practice. In addition to departmental guidance, UCL’s Arena Centre for Research-based Education offers a scheme for the training and development of PGTA’s, called UCL Arena One.

Arena One begins with an introductory Gateway Workshop, which is designed to prepare you for your PGTA responsibilities, introduce you to methods in and approaches to teaching and learning, and provide an opportunity to meet Arena Centre staff and fellow PGTA’s as you enter the postgraduate teaching assistant community at UCL. Attendance at this session is required for all postgraduates with responsibility for any teaching and learning support (including assessment) at UCL. If you have already attended a similar introductory training, please contact us at arena.one@ucl.ac.uk to find out whether you still need to attend a Gateway Workshop.

PGTA’s also have the option of attending an extended course, the UCL Arena One Teaching Associate Programme (TAP). This course is highly interactive and participants have the opportunity to tailor the content to their needs and teaching contexts, and to work towards a nationally recognised teaching award: an Associate Fellowship of the Higher Education Academy.

PGTA’s with a substantive teaching role are strongly encouraged to attend TAP.

Further information can be found on the UCL Arena website: www.ucl.ac.uk/arena/one and through the Doctoral Skills Development Programme.

Here is what previous TAP participants have said about the course:

“It has been nice to see I am not the only one with certain worries when teaching, like not knowing the answer to some questions or giving proper feedback to the student.”

“It was insightful to hear about different styles of teaching and has challenged me to think about my own future teaching.”

“It has helped me to reflect about the teaching I have done so far but mostly I feel more confident in planning and assessing future teaching.”
Developing as a skilled researcher involves the ability to manage your own professional and career development. At the UCL Careers Researcher Programme, we can help you explore your options and plan your next steps, whether they'll be within or beyond academia. Our support – detailed below – can be accessed via our researcher-dedicated webpages at: www.ucl.ac.uk/careers/researchers

**One-to-one careers support**

We offer one-to-one appointments with specialist researcher careers experts. In these appointments you can discuss anything career-related, including exploring career options, career progression, and getting feedback on CVs and applications.

Book appointments via MyUCLCareers

If you have been invited for a job interview, no matter what the role, you can book a mock interview to practice for the real thing.

Book a practice interview

**Employer forums and Skills sessions**

Our employer forums are an opportunity for you to hear from PhD-level alumni working in non-academic roles. Each of our speakers will introduce themselves, their career path and offer key pieces of advice before it’s over to you to ask your questions. Employer skills sessions will introduce you to a non-academic skill and offer practical tips on its application in work and research.

Book via MyUCLCareers or via the Calendar of Events

**Careers workshops for researchers**

Our specialist researcher careers consultants run a series of workshops covering careers within academia and beyond. The workshops are repeated throughout the year and cover topics such as academic career planning, academic and non-academic CVs and interview skills, identifying strengths, interests and values, and improving your social networking profile.

Book via MyUCLCareers or via the Calendar of Events

**Internships and other opportunities**

We gather researcher-relevant opportunities, such as internships and part-time/full-time roles, for you to view (and sign up to receive daily/ weekly alerts) via MyUCLCareers.

Find out more on our website here and keep an eye out on the UCL Doc Skills newsletter for the latest researcher opportunities!
As a researcher, you will be a member of a number of communities beyond your supervisory team or immediate working environment: a research group, a department, a seminar group or journal club, a professional society perhaps (many of which are headquartered or hold meetings in London), and international communities. Researcher Communities and Networks are in essence groups of people that interact with each other. They can involve a rich menu of support, advice, events, projects, collaboration, outputs and publications – and are constituted and operate in many different ways both face-to-face and/or online.

Conferences, meetings, fairs, journals and books are still central to the dissemination of research results and for engaging with others, but the development of information technology and social media is changing the way research is conducted and communicated, and the way we interact with others. Established scholarly networks and societies have created virtual communities for their members, and new academic virtual communities are now important vehicles for researchers to interact. Engagement with research and with researchers is increasingly through educational and research email discussion lists (for example JISCMail), and academic oriented social networks (like Mendeley, Research Gate, Academia.edu) but also blogs, vlogs, tweets etc. You will need to explore what tools are appropriate for your aims and in what way you might use even familiar tools such as Facebook, WhatsApp, Linkedin or Twitter in a research context.

We’ve gathered together on these pages only a small selection of what is available to you at UCL as a starting point: your colleagues and peers are the best way to find out more, particularly of what is available in your department and in your field. Get in contact with the existing areas that interest you, explore your own discipline and other cognate ones. If there is no group or network in an area that interests you, then think about setting it up yourself. This is part of you forging the future of your discipline and your career, and of finding the right support for you and your work.

There may even be some funding available from the Doctoral School, OVPR, your Department/s, or the Students’ Union to help you do so.

We hope to help you do so.

UCL Research Domains and their Early Career Networks

UCL’s Research Domains are large, cross-disciplinary research communities (staff and students) that span UCL and our partner organisations, fostering interaction and collaboration. Each Research Domain includes a number of more specific research Themes which are of strategic importance to the Domain and UCL.

In general, the Domains and Themes aim to bring together researchers from across UCL to share experience and perspectives, increase the impact of their research and explore the exciting range of opportunities available within and beyond UCL. They provide much vital information on events and seminars, and key mailing lists and newsletters to get plugged into the latest developments.

The current UCL Research Domains are listed below, and additional Domains will be coming in the future:

- Neuroscience
- Personalised Medicine
- Populations & Lifelong Health
- Cancer
- Environment
- eResearch
- Collaborative Social Science
- Food, Metabolism and Society
- Space
- Microbiology

For more information, please see: www.ucl.ac.uk/research/domains

UCL Academic Research Networks, Societies and Groups

There is a wide range of academic and research networks, from the small to the large at UCL, reflecting the breadth of our research. A small number are listed below, the majority student-led, to give you a flavour of some of the exciting groups out there.

Your department, Supervisor and fellow students will have detailed information on what is organised within your department/faculty and particularly useful in your field.

There is a wide range of academic and research networks and societies at UCL, reflecting the breadth of our research community. The majority are student-led.

See a list of our networks and societies on the Doc School pages: www.grad.ucl.ac.uk/societies/

UCL Public Engagement Networks

A combination of regular meetings and monthly newsletter, the UCL Public Engagement Network brings together UCL staff and students interested in public engagement whether they are an old hand of a complete novice: www.ucl.ac.uk/culture/projects/public-engagement-network

Organised by the UCL Public Engagement Unit, Volunteering Services and one or more partner organisations, Creating Connections is a regular networking event that brings UCL staff and postgrads together with social enterprises, residents’ groups, charities and other community organisations. The aim is very simple – to explore ways of working together with mutual benefit: www.ucl.ac.uk/culture/projects/creating-connection
UCL is proud to celebrate the cultural diversity of its community. Key to UCL’s success are the talents and experiences of our diverse community.

Key objectives are focused on ensuring all students feel a sense of belonging at UCL, that we develop inclusive curricula that better speaks to the diversity of our community and that our academic and research staff profile is more representative of the diverse profile of our student body.

UCL has several staff and student networks, both face-to-face and virtual, offering opportunities for those with shared identities to socialise and work collaboratively. For more information about these please visit www.ucl.ac.uk/equality-diversity-inclusion/equality-diversity-inclusion-committees-and-networks

RaceMatters@UCL is a forum on race equality at UCL.

GEN is a UCL virtual network that allows any member of our community who is interested in gender equality to find out more.

Parents and Carers Together Network (PACT) raises awareness of the needs of working parents and carers.

Out@UCL is a network for LGBTQI+ staff and students.

Friends of Out@UCL is a network for LGBTQI+ allies.

LGBTQ+ STEM @UCL Network for staff and students who identify as LGBTQI+ working in STEM (Science, Technology, Engineering, and Mathematics) disciplines.

UCL Trans Network is an informal network on MS Teams for everyone (staff & students) at UCL who identifies as trans (including non-binary, genderqueer & all other identities not identical with the gender assigned at birth).

The Interfaith Forum supports and showcases the diversity of religious belief within UCL’s community and promotes understanding, respect, positive relationships and constructive dialogue between people of all faiths and none.

In addition to the staff and student networks listed here, there are also a large number of Student Union clubs and societies.
Students’ Union UCL exists to make more happen at UCL, and they’ve been doing it for more than 125 years. UCL is a majority postgraduate university and the Union has more than 20,000 postgraduate members. They know that postgrad life is different and they’re set up to support you throughout your time here.

While everything we do at the Union is open to all students, we do understand that the needs of postgraduate students are different to other students and therefore require more specific representation, which is why we have dedicated elected representatives, namely our Postgraduate Officer and Research Students’ Officer as well as a Faculty Representative in each faculty specifically representing the interests of research students.

Many students, particularly those focusing on research, say it can be difficult to meet their peers and feel a part of the UCL community. We work hard to bridge the gap between your academic and non-academic life. Conferences, events, sports, arts, society activities, and volunteering opportunities in London are all organised by us and open to you. We also find ways for you to share your work with your peers from a range of disciplines; look out for the 3 Minute Thesis competition. We created a strand of activities under our Project Active programme which are specifically for postgraduate students, check these out on our website to help you stay active during your time at UCL.

As a Union of more than 40,000 students, we give you the power to shape the elements of the university that affect you. We believe that having your voice heard within your faculty and department is the key to improving the quality of education and research at UCL. You can have a say in the decisions that will affect your time here by becoming research student representative.

It’s not just the university you can change. The Union is for students and led by students so you can get involved with making it as good as it can possibly be. Twice a year we elect the students who will run the organisation, and you will always have the chance to stand to be one of those leaders or vote for the students you want to do the job for you. The first round is in October, so keep an eye out for it.

There’s more to the Union that we can cover here, so keep in touch with us via our fortnightly PG email (you’re automatically signed up) or any of our social media channels.

Louise Mc Grath-lone | Institute of Health Informatics
Being part of UCL’s doctoral community means being engaged in a dialogue with us about your experience at UCL — letting us know what you particularly value and things that you would like to see improved. Research students have different needs to other communities of students, in some ways much closer to early career research staff.

It’s important that your voices help shape and influence the work of departments, faculties, and UCL as a whole.

There are many ways of letting us know your views, for example by speaking to your supervisory team and members of your department and faculty staff, for example your local Administrators or Departmental Graduate Tutors. There are also structured and formal ways of feeding in your views to the way UCL works and supports research students.

**Research Student Academic Representatives**

Student academic representation at UCL is conducted in partnership with our Students’ Union. Each department and faculty appoints Research Student Representatives to ensure all views across the research student community are represented.

Staff-Student Consultative Committees (SSCCs) are local meetings between students and academics where students have an opportunity to share feedback with staff, to develop solutions to students’ concerns, and to prioritise areas for improvement.

You should find out from your local administrators how your local SSCC operates and who the rep is for your area so you can feedback or volunteer to be a rep yourself!

You can find further information on Academic Student Representatives, including contact information for the Research Student Representatives in your area, more on what the reps do, and how to get involved yourself, on the Students’ Union website.

**Postgraduate Research Experience Survey (PRES)**

Every two years UCL takes part in the national Postgraduate Research Experience Survey (PRES) usually from early March until May. PRES is a national survey, co-ordinated by the national body for improving teaching and learning in Universities, Advance HE. The survey is a crucial opportunity for our research student community to tell us about their experience; it asks questions about key areas such as: supervision; resources; research skills and professional development.

The results are published on the Doctoral School’s website and discussed by the key UCL committee looking after the standards of research degree provision, Research Degrees Committee, and with the various stakeholders (for example UCL’s faculties, the UCL Student Union) to make sure we identify and implement actions.

The Doctoral School uses the information gained to consider how to make improvements at UCL, and also to inform our work for the wider research student community through national bodies like Vitae, or LERU (the League of European Research Universities).

The next PRES will be held in 2023. You will be emailed a link directly so that you can participate and let us know what you think.

Please see the Doctoral School survey pages for the results and action plans of all previous surveys including the most recent one from 2021.

“The survey is a crucial opportunity for our research student community to tell us about their experience; it asks questions about key areas such as: supervision; resources; research skills and professional development.”
COMPETITIONS

The Doctoral School runs competitions each year, offering you the chance to share your research and win some generous prizes. These include: the Research Images as Art/Art Images as Research Competition, the Research Poster Competition and the UCL Three Minute Thesis.

Research Images As Art/Art Images As Research Competition

The Doctoral School runs a competition for researchers and artists, both students and staff, who are invited to submit images associated with their work, which have an aesthetic appeal. Selected images are used to illustrate this handbook and other UCL publications.

An exhibition of the images is held centrally in College and assessed by a panel of judges. Pictures are selected by the panel on the basis of their aesthetic appeal, the nature of their subject matter and technical quality. The panel is particularly interested in images that effect a transformation in the eye of the viewer in translating or communicating the subject that they portray and which have the potential to alter the way that we view the world. Prizes are awarded for the best images and all the images are presented in an online gallery on the Doctoral School website.

A selection of images from the 2020/21 Research Images as Art competition is featured throughout this handbook.

Research Poster Competition

The Doctoral School organises an annual Research Poster Competition for all UCL research students. Students are invited to display their posters centrally in College and these are then judged by a panel of UCL academics.

Prizes are awarded for the best posters. The posters exhibited should convey the essence of a student’s research to an audience of both colleagues and non-specialists.

The exhibition attracts interest among UCL staff, students and visitors. The competing students have in the past found it a valuable way of focusing on their own research, and learning about the research of others.

UCL Three Minute Thesis (3MT®)

Your PhD thesis will be tens of thousands of words long when you submit it. Could you explain it in three minutes?

The Students’ Union UCL run a Three Minute Thesis competition at UCL in the summer term, the winner of which is eligible to enter the national semi-finals, and hopefully the finals. Selectin heats are held at faculty level.

Three Minute Thesis (3MT®) celebrates the exciting research conducted by research students. Originally developed by the University of Queensland, the competition focuses on students’ academic, presentation, and research communication skills. The competition supports students’ capacity to effectively explain their research in three minutes, in a language appropriate to a non-specialist audience – it is also great fun.

Further information on all our events and competitions can be found on our website at: www.ucl.ac.uk/docschool/events

SPACES FOR GRADUATES

All UCL learning spaces are available to research students. You can book a study space on the Library Services webpage.

Student Centre (A)
The Student Centre is designed from the ground up with student needs and the student experience at its heart. The Student Enquiries Centre is located on floor 1 and has 1,000 new study spaces, radically improving the way you move and learn on campus.

Science Library Postgraduate Cluster Room (B)
A PC cluster exclusively for graduates situated in the Science Library (DMS Watson Building) alongside other clusters.

Research Grid in the Science Library (C)
This study suite located on the 4th floor of the Science Library provides a contemporary 74-seat space to study either collaboratively or in private.

Graduate Hub
A space for graduates to meet on central campus, comprising a seminar room for group discussion and presentations, a breakout space with integrated kitchenette, 9 individual study carrels and a common room with Desktop PCs and comfortable seating. The room is located in the South Wing basement opposite the Print Room Café.

Senate House Hub
The Hub includes 160 quiet and social spaces, PCs, Print@UCL and four student bookable meeting/training rooms.
We need your help to say **Full Stop** to bullying, harassment and sexual misconduct.

Help to create a supportive and inclusive environment at UCL.
